PORTFOLIO

Github_/RaXephon
LinkedIn_/in/shashkap
Website_raxephon.github.io

SKILLS

Languages
- Python
- C/C++
- Java
- Scala
- OCaml
- Ruby

Frameworks/Tech
- Node.js
- AWS
- Heroku
- PySpark
- Hadoop
- Tensorflow

BackEnd
- Python
- JavaScript
- PHP

FrontEnd
- HTML5/CSS
- Dash Plotly
- React.js

Databases
- SQLite
- MySQL
- MongoDB
- AWS RDS

Computational Analysis
- R
- SAS

Very familiar with **C**, **Python**, **Java** and **Node.js**.

Strong **collaboration**, **problem solving** and **critical thinking** skills.

PUBLICATIONS

- Agrawal, S, T Lin, S Kapoor, T Balachander, M Konduri, and B Carlisle (2018). MultiSeg: Multiple-Instance Video Object Segmentation with Unsupervised Instance Tracking. Working Paper; available upon request.

LANGUAGES

Hindi > native
English > fluent

EDUCATION

#University of Maryland, College Park, MD
B.S. in Computer Science & a minor in Statistics — 95 Credits (Senior)

Selected Coursework:
- Computer and Network Security
- Algorithms
- Linear Algebra
- Intro to Deep Learning
- Intro to Data Science
- Calculus III
- Applied Probability and Statistics I & II

Anticipated Graduation: May 2020

WORK EXPERIENCE

#Software Engineering Intern — Jun 2019 > Present
@ Fraunhofer CESE
- Designed an ETL workflow for real time data processing (currently >1 million records) using AWS and PySpark on in-house Spark buckets.
- Developing a comprehensive web based user dashboard for data visualization and predictive analysis using Dash.
- Implementing a deep discriminative autoencoder architecture for feature extraction from contracted party's S3 image buckets.

#Research Assistant — Aug 2018 > Present
@ Tiwary Group, University of Maryland
- Developed mathematical models using Monte Carlo techniques to study molecular interactions between protein folds and other biochemical events.
- Conducting computational research on modeling the interplay between thermodynamics and dynamics in complex real-world systems, relevant to material sciences.

#Head of Logistics — Jun 2018 > Sep 2018
@ RealityHacks
- Successfully managed the schedule and mini-events like workshops, talks, etc.
- Monitored external services required for the success of the hackathon.
- Supervised and evaluated a team of logistics officers.

#Research Assistant — Jan 2018 > Jun 2018
@ Cognitive Neuroscience of Language Lab, University of Maryland
- Performed data mining and data manipulation using pandas, numpy and pyaudio.
- Provided consistent, high quality logistic support to researchers for successful experiements.
- Assisted with setting up and conducting experiments (usually EEG tests).

PROJECTS (Available on GitHub)

#Twitter Analytics - Personal Project — July 2019 > Present
- Set up a data pipeline to collate real time tweet data from twitter4J library and implemented basic filtering.
- Developing a MapReduce job for analyzing and interpreting retweet behavior to predict trending topics in the future.

#Ising 1D & 2D Model - Tiwary Lab — Jan 2019
- Ising model is a mathematical model in Statistical Mechanics and is primarily used to show phase transitions (eg. liquid state to solid state).
- Implemented Monte Carlo techniques to simulate the Ising 1D & 2D models in a closed system using pandas, numpy, and pillow.
- Currently working on a CNN to simulate the 2D Ising model in an open system with unsupervised outside variables.

#Scribr - Medhacks — Sep 2018
- Architected an app that aims to reduce doctor stress and make more efficient use of time by providing automated scribing services using node.js .and HTML/CSS.
- Implemented natural language processing techniques and heuristics designed to translate doctors' words into completed medical data sheets.

#PlannrBot - HopHacks (2nd Runner-up) — Feb 2018
- Launched a web speech recognition chatbot that converses with the user to help create an itinerary for their upcoming trip using natural language processing.
- Made with Node.js, Python, PHP, Spacy (for natural language processing), Google's Speech & Places API and Yahoo!'s Weather API.
